General product information and other remarks:

Product covered by this report is medical power supply module, which can be used as a part of medical equipment. The different models are corresponding to two structure types respectively.

One type is power adapter, which can be used with detachable power supply cord. Different appliance inlets can be interchangeable on the device, which can provide earthing connection or not. Protective earthing connection to secondary circuit by internal wiring is optional, so it can be Class I or Class II construction or Class II with functional earth. Both two constructions are in consideration in this report. Two pieces of outer enclosure are enclosed with ultrasonic welding and screws.

The other type is open-frame power supply board, which is the same as adapter model except input and output terminals and traces on the board. The installation and use for the insulation construction shall be finally determined in the end product.

All the types are designed for continuous operation and no applied part is defined.

The insulation construction of EUT is evaluated as 2MOPP in this report as customer's request.

Tests were performed on 12Vdc/7.5A, 37.5Vdc/2.4A and 48Vdc/1.875A output power adapter model as representative, and also performed on other output models for reference. The clearance & creepage distance measurement, mechanical strength and temperature rising of open frame model shall be revaluated in end product combined with this report.
Each standard rated output voltage designation corresponds to a transformer model. Each transformer model is identical in insulation construction including clearance and creepage except number of turns per coil.

Model Similarity:

GT*41133-***
The 1st "*" can be 'M' or '-' or 'H' for market identification and not related to safety.
The 2nd "*"can be "01" to "90", with interval of 1, denotes the rated output wattage designation.
The 3rd "*" can be "16", "24", "35" and "48", denotes the standard rated output voltage designation.
The 4th "*" can be "-0.1" to "-12.9" with interval of 0.1, denote voltage deviation or blank to indicate no voltage different,
The 3rd "*" and 4th "*" together denote the output voltage, with a range of 12 - 48 volts
The 5th "*" can be "-T2", "-T3A", "-F", "-FW"
"-T2" means desktop class II with C8 AC inlet
"-T3A" means desktop class I or class II with functional earth with C6 AC inlet
"-F" means Open Frame class I or class II with functional earth
"-FW" means Open Frame class II
The last * can be any six character = 0-9 or A-Z or ()[] or – or blank for marketing purposes.
The models with input rated frequency range "50-400Hz" are totally the same as those with "50-60Hz" rating.

GT*961200P** and GT*96900P******

The 1st "*" can be 'M' or '-' or 'H' for market identification and not related to safety.
The 2nd "*" can be the rated output wattage, which can be "-01" to "-120" with interval of 1 and "-" can be omitted.
The 3rd "*" can be "12" to "54" or "12.0" to "54.0" in 0.1V increments, denote the standard rated output voltage designation.
The 4th"*" can be "-T2", "-T2A", "-T3", "-T3A", "-T3TAB", "-TW", "-TW3", "-TP", "-TP3", "-P2", "-P3"
"-T2" means desktop class II with C8 AC inlet
"-T2A" means desktop class II with C18 AC inlet
"-T3" means desktop class I or class II with functional earth with C14 AC inlet
"-T3A" means desktop class I or class II with functional earth with C6 AC inlet
"-T3TAB" means desktop class I or class II with functional earth with C14 AC inlet and housing with a tab.
"-TW" means desktop class II with input wire without plug
"-TW3" means desktop class I or class II with functional earth with input wire without plug
"-TP" means desktop class II with power supply cord with plug
"-TP3" means desktop class I or class II with functional earth with power supply cord with plug
"-P2" means Encapsulated Type, class II, with two-core input wire, IP68
"-P3" means Encapsulated Type, class I or class II with functional earth, with three-core input wire, IP68
The last * can be any six character = 0-9 or A-Z or ()[] or – or blank for marketing purposes.

Technical Considerations:

1. **Scope of Power Supply evaluation defers the following clauses to be determined as part of the end product investigation:**
   - **a) Clause 7.9 (Accompanying Documents of power adapter model are provided for some critical issue like technical data, safety warnings, necessary information to set up. Further evaluation is needed for both power adapter model and open frame model on end product level.),**
   - **b) Clause 8.11.5 (Mains Fuse with High Breaking Capacity),**
   - **c) Clause 9 (ME Hazard), except 9.1 and 9.3 are evaluated,**
   - **d) Clause 10 (Radiation),**
   - **e) Clause 11.7 (Biocompatibility),**
   - **f) Clause 14 (PEMS),**
   - **g) Clause 16 (ME Systems)**
   - **h) Clause 17 (EMC),**

Determination of the test conclusion is based on IEC Guide 115 in consideration of measurement uncertainty.

Supplementary Information:

1) The same area is evaluated in open frame model. And there is no more difference if not specified.
2) Multiplication factor for MOOP: 1.48; Multiplication factor for MOPP: 1.29.
3) Minimum 0.4 mm thick Mylar sheet or two layers of insulating tape wrap around internal conductive parts along the enclosure joint. This method is applied only to the model sold to high elevation region. Otherwise, the clearance and creepage distance is measured as 5.7/5.7 mm.
4) The working voltage is highest measured value which acquired by testing all the models listed in the report at the rated input voltage, but not less than the rated input voltage.

IEC 60601-1			
Clause	Requirement + Test	Result - Remark	Verdict

5) Linear interpolation is applied to the determination of required creepage.
6) The minimum creepage and clearance is selected from all the types of optocouplers.
7) The bottom of ferrite core is wrapped around 2 layers of insulating tape.
8) Two layers of insulating tape or two layers of insulating tube wrap around the heatsink.
9) Creepage shall not be less than Clearance.

INSULATION DIAGRAM CONVENTIONS and GUIDANCE:

A measured value must be provided in the value columns for the device under evaluation. The symbol > (greater than sign) must not be used. Switch-mode power supplies must be re-evaluated in the device under evaluation therefore N/A must not be used with a generic statement that the component is certified.

Insulation diagram is a graphical representation of equipment insulation barriers, protective impedance and protective earthing. If feasible, use the following conventions to generate the diagram:

- All isolation barriers are identified by letters between separate parts of diagram, for example separate transformer
  windings, optocouplers, wire insulation, creepage and clearance distances.
- Parts connected to earth with large dots are protectively earthed. Other connections to earth are functional
- Applied parts are extended beyond the equipment enclosure and terminated with an arrow.
- Parts accessible to the operator only are extended outside of the enclosure but are not terminated with an arrow.

Supplementary information:
[1] Maximum allowable temperature on surfaces of test corner is 90 °C
[2] Max temperature determined in accordance with 11.1.3e)
[3] When thermocouples used to determine temperature of windings, limits of Table 22 reduced by 10 °C.
[4] Supply voltage:
- ME EQUIPMENT with heating elements - 110 % of the maximum RATED voltage;
- Motor operated ME EQUIPMENT - least favourable voltage between 90 % of the minimum RATED and 110 % of the maximum RATED voltage. ME EQUIPMENT operated under normal load and normal DUTY CYCLE.
- Combined heating and motor operated and other ME EQUIPMENT - tested both at 110 % of the maximum RATED voltage and at 90 % of the minimum RATED voltage.

	[Replace Clause 8.6.4 in the adopted Standard, as modified by IEC Amendments 1 and 2, with the following]		P

IEC60601_1U ATTACHMENT			
Clause	Requirement + Test	Result - Remark	Verdict
	PROTECTIVE EARTH CONNECTIONS shall be able to carry fault currents reliably and without excessive voltage drop.		P
	Impedance and current-carrying capability shall comply with CSA C22.2 No. 0.4.		P
	For PERMANENTLY INSTALLED ME EQUIPMENT and ME EQUIPMENT with a non-DETACHABLE POWER SUPPLY CORD, the impedance between the PROTECTIVE EARTH TERMINAL (inside the ME EQUIPMENT) and any part that is PROTECTIVELY EARTHED shall not exceed 100 mΩ. For ME EQUIPMENT with an APPLIANCE INLET, the impedance between the earth pin of the APPLIANCE INLET and any part that is PROTECTIVELY EARTHED shall not exceed 100 mΩ……..:	Not permanent connected device	N/A
	In addition to the test above, for ME EQUIPMENT with a non-DETACHABLE POWER SUPPLY CORD or any DETACHABLE POWER SUPPLY CORD (supplied or specified by the MANUFACTURER), the impedance between the protective earth pin of the MAINS PLUG and the PROTECTIVE EARTH TERMINAL (inside the ME EQUIPMENT) shall not exceed 100 mΩ…….:	Detachable device	N/A
	Where an APPLIANCE INLET forms the supply connection to ME EQUIPMENT, the earth pin of the APPLIANCE INLET is regarded as the PROTECTIVE EARTH TERMINAL. The combined testing requirements above are equivalent to 200 mΩ impedance testing requirements as described in IEC 60601-1. Separate testing is required to comply with CSA C22.2 No. 0.4.		N/A
	Testing shall be carried out using a DETACHABLE POWER SUPPLY CORD as provided or specified (length and cross-sectional area as per the Canadian Electrical Code, Part I) by the MANUFACTURER.		P
	The test current shall have the following characteristics: — for cord-connected equipment, twice the rating of the attachment plug cap, but not less than 40 A; — for equipment for permanent connection to the supply, twice the rating of the fuse that is required by the *Canadian Electrical Code*, *Part I* for the branch circuit to which the equipment is connected, up to 250 A; and — 500 A for equipment for permanent connection to the supply when a branch circuit fused at over 250 A is required.	Not such device	N/A
	Compliance is checked by the following test:		N/A

IEC60601_1U ATTACHMENT			
Clause	Requirement + Test	Result - Remark	Verdict
	— for test currents up to 500 A, the measured potential drop shall not exceed 4 V; — for equipment that requires branch circuit fusing over 250 A, the measured potential drop multiplied by the required fusing and divided by 250 shall not exceed 4 V; — there shall be no melting of any metal in the bond and no heating or burning that is likely to create a fire hazard; and — the time duration— the time duration for testing is indicated in Table 8.6.4A:		
	Table 8.6.4A **Time duration of impedance test current** **Fusing of branch circuit required for equipment (A)** / **Time (min)** 0–30 / 2 31–60 / 4 61–100 / 6 101–200 / 8 201 and over / 10 **Note:** *Additional information can be found in CSA C22.2 No. 0.4.*		N/A
	Alternatively, dc may be used for this test, if the ME EQUIPMENT is rated dc.		N/A
	Note: When protective earth is relied on as a MEANS OF PROTECTION, the test current is determined based on the location where a fault could occur. If the prospective fault is in the mains supply circuit prior to the overcurrent protection included in the ME EQUIPMENT, the test current for that part of the protective earth circuit is based on the rating of the external overcurrent protection included in the building infrastructure or specified in the ACCOMPANYING DOCUMENTS (two times the interrupt rating of the external overcurrent protection). If the prospective fault is in the mains supply circuit after the overcurrent protection included in the ME EQUIPMENT, the test current is based on the rating of the overcurrent protection included in the ME EQUIPMENT (two times the interrupt rating of the ME EQUIPMENT overcurrent protection). In either case, the minimum test current is 40 A. The voltage drop between the parts described is measured and the impedance determined from the current and voltage drop. If the measured impedance is within the permitted limit, either the impedance measurement is then repeated using a current source with a no-load voltage sufficient to deliver the specified current into the total impedance, or the current-carrying ability of the relevant protective earth conductor and protective earth connection is confirmed by checking that their cross-sectional area is at least equal to that of the relevant current-carrying conductors. 	The following requirements for POWER SUPPLY CORDS shall apply:		N/A
	a) The MAINS PLUG of non-PERMANENTLY INSTALLED EQUIPMENt shall be:		N/A
	i) if moulded-on type, a hospital-grade mains plug complying with CSA C22.2 No. 21;	No power cord	N/A
	ii) a hospital-grade disassembly attachment plug type complying with CSA C22.2 No. 42; or	No power cord	N/A
	iii) Class II equipment having fuses on the line side(s), and the neutral may use a non-polarized attachment plug or a polarized attachment plug. CSA configuration type 1-15P shall be required and meets all applicable requirements in CSA C22.2 No. 21 and CSA C22.2 No. 42. Where a polarized attachment plug is used, the POWER SUPPLY CORD is connected to the wiring of the EQUIPMENT on the ungrounded side of the line when any of the following devices are used in the primary circuit:	No power cord	N/A
	1) the centre contact of an Edison base lampholder;	No power cord	N/A
	2) a single pole switch;	No power cord	N/A
	3) an automatic control with a marked off position;	No power cord	N/A
	4) a solitary fuse/fuse holder; or	No power cord	N/A
	5) any other single pole overcurrent protective device.	No power cord	N/A
	b) A detachable POWER SUPPLY CORD for non-PERMANENTLY INSTALLED EQUIPMENT (cord-connected equipment) shall be of a type:		N/A
	i) that can be shown to be unlikely to become detached accidentally, unless it can be shown that detachment will not constitute a safety HAZARD to a PATIENT or OPERATOR;	No power cord	N/A
	ii) for which it can be shown that the impedance of the earth (ground) circuit contacts will not constitute a safety HAZARD to a PATIENT or OPERATOR; and	No power cord	N/A
	iii) that has a terminal configuration or other constructional feature that will minimize the possibility of its replacement by a detachable POWER SUPPLY CORD which could create a HAZARDOUS SITUATION.	No power cord	N/A
